# HACKERS NEVER SLEEP – BUT YOUR DATA CAN

## Protect your sensitive data in development, design, research, finance or medical industry

Business, scientific or government information must be secured against unauthorised access, theft or loss. Thanks to SecureData technology, you can store and transport your data **100% securely and encrypted in the best possible way with AES 256-bit XTS Hardware Encryption**. Our external storage devices are very easy to use and can be unlocked with a keypad or facial recognition without additional software on the end device.

SecureDrives are **FIPS 140-2 Level 3 validated** and are used by the military, among others. This guarantees **100% secure data storage** and data transmission as well as protection against brute force attacks by automatic locking or by destruction when the devices are dismantled. You benefit from **seamless use regardless of the operating system** on any platform and any device with a USB connection.

Every bit of your data is automatically encrypted in real time. In addition, the devices can be managed remotely directly with the associated **SecureDrive Remote Management Software**.

**Order our Encrypted Hardware Solutions quickly and easily in our webshop!**

**Or contact us for further information direct:!**
