

FAST FACTS: COLLABORATIVE INDUSTRY INNOVATOR

Empower innovation and better manage your business by providing teams with the ability to collaborate in real time on product content in a secure and structured environment.

- 1 Break down information silos.** Collaborate across development disciplines with full flexibility and traceability and empower contributors to organize, manage and work together in an easily accessible, consistent and secure manner.
- 2 Organize and access work using tasks.** Visually organized on a virtual Kanban board, tasks enable everyone on your team to see new, in-progress and completed work. Drag and drop related deliverables into a task for ready access when needed.
- 3 Enable true concurrent design.** Manage the product structure as data on the **3DEXPERIENCE** platform so designers have instant access to updates made by other contributors working in their CAD or multi-disciplinary apps.
- 4 Manage and track important data with full traceability.** Project teams have a powerful way to share and manage data—from multi-physics simulation data to manufacturing process planning—with full traceability and flexibility.
- 5 Find data faster.** By providing a secure single repository to store, share and manage content, search and find relevant data, this role enables you to navigate through a product data set and easily view and compare 3D content. All the data is indexed to enable intelligent search based on text or tags.

“Having access to current technical product data as well as the ability to work concurrently in a virtual environment with process continuity is solving many communication issues between our technical departments as we can now see exactly who is doing what.”

- Kamil Popow, design product engineer, Nowy Styl

“We chose the **3DEXPERIENCE** platform to gain a 360-degree view of all the information we need to innovate. It supports us to take the documentation requests from our customers, ensure product quality, manage changes, approve modifications and release CAD data in the proper way... The **3DEXPERIENCE** platform brought us order and helped to avoid any confusion in the product development process.”

- Roberto Marengo, Chief Technology Officer, Sabelt
